

Bentley®

Powered by iTwin Guide

overview

Digital twins are creating exciting new opportunities for independent software vendors, systems integrators, engineering firms, solution providers, and others.

The iTwin platform is a collection of APIs and cloud services for building digital twin applications and workflows for infrastructure assets. The platform accelerates development by solving challenges such as data integration, visualization, change tracking, security and more.

The goal of the Powered by iTwin program is to foster a thriving ecosystem by helping promote digital twin solutions built on the iTwin platform.

benefits

The program gives your application increased exposure and differentiation in the market.

Powered by iTwin badge	◆
Product listing in Powered by iTwin Directory	◆
Quote from Bentley executive for your promotional press release	◆
Announcement of product accreditation via Bentley Systems social media	◆

criteria

To qualify, an application must meet at least one of the following criteria.

Offers capabilities built on the iTwin commercial platform

Offers capabilities built on iTwin.js

Provides visualization of an iTwin

Provides insights by consuming data from an iTwin
(i.e. for reporting, analytics, simulation, AI/ML, etc.)

review process

Step 1

Developer submits program application form.

Step 2

Bentley reviews the program application form to confirm eligibility.

Step 3

If approved, Bentley will notify developer and provide them with a Powered by iTwin accreditation agreement.

If not approved, Bentley will notify developer of its findings.

Step 4

Upon execution of the agreement, Bentley will provide developer with a contact person for collaboration on the fulfilment of program benefits.

program requirements

Software Application	A software application that meets the program's technical criteria
Application Screen Shots	Two (2) high-resolution images of the software application's user interface
Organization Logo	A high-resolution image file of the developer organization's logo
Application Logo	A high-resolution image file of the software application or product line logo (if applicable)
